

ICM Poll for the Sunday Telegraph

Fieldwork dates: 16-17th September 2009

Interview Method: Telephone.

Population effectively sampled: All adults aged 18+ in GB

Sampling Method: Within Great Britain, a random sample of telephone numbers was drawn from the entire BT database of domestic telephone numbers. Each number so selected had its last digit randomised so as to provide a sample including both listed and unlisted numbers.

Sample size: 1018 adults aged 18+

Data weighting: Data were weighted to the profile of all adults aged 18+ (including non telephone owning households). Data were weighted by sex, age, social class, household tenure, work status, number of cars in the household and whether or not respondent has taken a foreign holiday in the last 3 years. Targets for the weighted data were derived from the National Readership survey, a random probability survey comprising 34,000 random face-to-face interviews conducted annually.

Questions: The computer tables attached in PDF format show each question, in full, in the order they were put to respondents, all response codes and the weighted and un-weighted bases for all demographics and other data including but not limited that published .
